

DIGGING IN CALIFORNIA.

THEY ARE FINDING PETROLEUM AS WELL AS PRECIOUS METALS.

Cook's Inlet Begins to Show a Bony Aspect.—In the Colorado River, near the mouth of the Colorado, a body of ore full of wire gold has been struck at a depth of fifty feet which assays \$400 to the ton. The ledge is 80 feet across.

A four-foot ledge of borate, carrying 50 per cent borax, has been located near Daguerre. A coal and petroleum excitement has been started in the San Timoteo hills, near San Bernardino. Nearly 200 men have been noticed claiming land for coal mining and petroleum. Several well-boring plants have been purchased.

Rice district, on the edge of the desert in San Diego county, reports a rich strike, a four-foot vein at the 30-foot level, in the N. E. mine, which was lately located by C. L. Nair for \$10,000.

Two new dredging boats for mining the Klamath River are being built. In the Anita mine, Amador county, good milling ore has been found on the 300-foot level. At the bottom of the 100-foot shaft in the Soap Root mine, Calaveras county, a four-foot vein has been struck that assays well. The Soap Root mine is yielding ore that pays \$40 to the ton in free gold, besides a large percentage of sulphur.

In Kern county in the Rand district, G. Kenyon & Sons have made a remarkably rich find. It is a blind ledge eight feet wide, and the vein is a strip of inch in width, extending through the ledge. The Blackhawk mine, Rand district, is now yielding ore which mills \$80 per ton. F. H. Heald has just located the ledge which feeds the gold fields of Coler.

For which thousands of prospectors have been hunted. It is a vein of fine, solid quartz, and in the first gold-bearing stratum ever found in the Federal Loan mine on the 800-foot level.

Along the coast range in Kings, Fresno, and San Luis Obispo counties there have recently been important oil developments. Hundreds of claims have been staked out, but only one well has been put down any depth. This yielded in four hours several barrels of oil of a very high grade with 70 per cent of petroleum. It is an exceedingly good find.

At Bodie there is a movement to bring in electric power from Walker River in sufficient quantity to work all the mills and the town. It is probable that all the important mines there will be consolidated under one management. The use of electricity will reduce the cost of mining and milling nearly \$3 per ton and make it possible to open up and work large bodies of ore hitherto untouched on account of the high price of fuel.

WASHINGTON.

Seattle, May 31.—On Guadalupe Island, one of the San Juan group, in the Straits of Georgia, some old workings that were abandoned nearly twenty years ago are being reopened, with very promising results thus far. A shaft had been sunk about forty feet, and a tunnel driven 340 feet to the bottom, but water interrupting the work was stopped, and the tunnel was abandoned. It is now being reopened, and the tunnel is being driven to a depth of 500 feet. The shaft is being driven to a depth of 500 feet. The tunnel is being driven to a depth of 500 feet.

Two new dredging boats for mining the Klamath River are being built. In the Anita mine, Amador county, good milling ore has been found on the 300-foot level. THE GOSPEL FROM A BOAT.

CAPT. CHRISTIANSEN COMMANDS THE HARBOR MISSION LAUNCH.

She is to be used as a Delivery Depot for Tracts and Religious Literature Among the Sailors in the Harbor. Her Skipper is a Seventh Day Adventist.

Capt. J. Christiansen, commander of the only mission launch in the harbor, spent yesterday aboard his boat getting things in shipshape. He will be ready to-day to begin the work which has been planned for him during the coming summer at the conference of Seventh Day Adventists, of which faith he is an energetic member.

The launch, which is lying in the Erie Basin at present, is as trim a craft as any boat of her kind in the harbor. She was launched recently in Newark, Bay, and after fitting her out with an engine Capt. Christiansen took her over to the Erie Basin to put on the finishing touches.

WEST POINT EXAMINATIONS.

Programme of Military Exercises—Members of the Graduating Class.

West Point, May 31.—The annual June examinations begin to-morrow, and as a consequence there is an unusually large number of visitors here and at the boarding houses in Highland Falls. The examinations will be held in the academy building, beginning at 9 A. M. and continuing until 4:30 P. M., until finished.

A few members of the Board of Visitors arrived to-day. The Board will meet at 10 A. M. to-morrow and organize. The Board will then officially notify the superintendent of the academy of its presence, and the superintendent and his staff will call upon the official body. After the review of the battalion of cadets, which occurs at 2 P. M., Col. Ernst will entertain the Board at his quarters, together with the other distinguished visitors. President Cleveland is expected to visit the post for one day during the examinations, but the date of his coming has not yet been indicated. He will be the guest of Col. Ernst while here.

The following is the programme of outdoor military exercises which are to take place each day during the examinations:

Monday, June 1.—Escort of the colors and review, 10 A. M.—School of the troop (rising on the parade ground).

Tuesday, June 2.—Military band construction (parade ground).

Wednesday, June 3.—School of the troops (parade ground).

Thursday, June 4.—School of the troops (parade ground).

Friday, June 5.—Heavy artillery drill (large academy grounds).

Saturday, June 6.—School of the battalion (parade ground).

Sunday, June 7.—Use of the sword and bayonet (parade ground).

Monday, June 8.—Heavy artillery drill (large academy grounds).

Tuesday, June 9.—Drill in extended order, with review of the day's work.

Wednesday, June 10.—Review of the members of the graduating class, according to their present standing in general merit.

The following is a list of the members of the graduating class, according to their present standing in general merit:

Shelton, G. H., Conn. 1. Hoffman, O. M., Pa. 2. Langdon, C. S., N. Y. 3. ...
